Dear Hiring Manager,

I am writing to apply for the Data Analyst position. I bring hands-on experience with Power BI, SQL, Excel, Python, and AI-powered analytics tools, along with a strong ability to transform data into actionable insights.

I have developed multiple dashboards using Power BI, performed SQL-based data analysis, and leveraged AI tools to automate reporting and enhance decision-making. My project work includes financial dashboards, sales analytics, loan analysis, and customer behaviour analysis.

Additionally, I bring over five years of teaching and mentoring experience, where I applied statistical analysis, hypothesis testing, and analytical thinking to real-world datasets while guiding learners through data analytics projects.

I am eager to contribute my analytical skills, business understanding, and passion for data-driven problem solving to your organization. I would welcome the opportunity to discuss how my skills can support your data initiatives.

Sincerely,

Mukesh Meena
